RGB Fans

PC Case Fans with RGB Lighting

COLORFUL COOLING

RGB Fans offer vibrant, customizable lighting and high-quality, low-noise pressure. Suitable for use anywhere.

$69.99

RGB Fan Types

Choose between three variations of RGB fans.

RGB Core

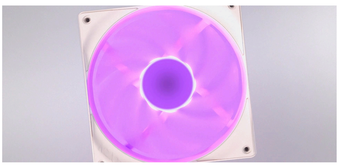
LEDs are diffused through translucent blades for a vibrant, full-ring illumination effect, or as single-frame fans for a simplified, cluster-free setup.

RGB Duo

Dual-ring LEDs hinder the blade edges and are visible from both sides. Available individually or in multipacks.

RGB

LEDs form a single ring of light. Best suited for cases with the fan. Available individually or in multipacks.



A Simpler Approach to RGB

Simplify your RGB with a single cable connection between the motherboard and the fans.

Break the Chain

Clip flatwire's modular hero end daisy-chain connector into the motherboard's CH4, CH5, and RGB Light Header ports, seamlessly combining two or three fans into a single connection. This simplifies installation and keeps a cleaner build with fewer connections, cables, and sockets.

NZXT Control Hub

Control your RGB lighting and cooling with advanced, intuitive, 3D-managing and highly-RGB lighting and fan speeds through CAM. Supports up to 6 RGB lighting and 6 Aer fan RGB devices, including a full lineup of RGB Core Single-Frame Fans.

Shop NZXT Control Hub

Cool With Color

RGB Fans combine the functionality of regular case fans with the added benefit of personalized flair.

Optimal Performance

An illustration of high airflow and static pressure.

Hybrid Blade Shape
Fan blades are designed to boost static pressure while lowering the pitch.

Concentrated Air
Fan blades are arranged dense powerful airflow even from the center.

Versatile Use
Suitable for case intake and exhaust, as well as on radiators and heat sinks.

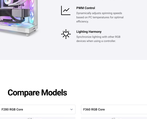
Smooth. Silent. Stable.

Designed to deliver the least noise possible.

Fluid Dynamic Bearings
Ensures quiet, stable operation across an unsupported 50,000 hour lifespan.

Zero RPM Mode
Fans stop spinning during low loads for near-silence.

Anti Vibration Frame
Minimizes fan vibration to prevent acoustic resonance in high speeds.



Customize with CAM

Sync fan speed and lighting for a fast fan control.

Vibrant Vibes
Personalized lighting effects across each fan, including individuals RGB LEDs.

PWM Control
Dynamically adjusts spinning speeds based on real-time measurements for optimal efficiency.

Lighting Harmony
Synchronized lighting with other RGB devices when using a controller.
